UNITED STATES GOVERNMENT

# Memorandum

25X1A

TO : [REDACTED]

DATE: 19 March 1965

FROM : DAD/S&D

SUBJECT:

I think there is a basic misunderstanding about the objectives of the RF Environmental Simulation capability which should be developed at the [REDACTED]. It is not now or should it be the intention to have these people go into a junior NSA or junior HEPC, etc., type of operation to determine what the situation is in the great outside world. However, when ASD, GSD or other parts of our organization determine that they are building equipment which is designed to work against this specific environment the [REDACTED] should have the capability of producing that environment in order that the equipment can be checked out. The determination of what the environment should be and why it should be that way should remain here at Headquarters. I believe this will completely remove the security problem; nothing higher than SECRET should be involved.
